

Asphalt Services

➤ New Asphalt Paving

Our experience with new road construction - commercial properties and residential communities - has provided us with the proficiency to handle all tasks related to asphalt paving. When it comes to building new roads and parking lots we are your premiere Asphalt firm.

➤ Asphalt Repairs & Patching

Pavement repairs and patching are often necessary as a result of deteriorating asphalt that can create potholes, slippage and depressions. Additionally, root damage and drainage issues can also require attention. Our preventative paving practices ensure that we diagnose arising repair needs early to reduce property owners' expenses.

➤ Asphalt Pavement Overlay

Pavement Overlays are often more economically practical than new pavement since a proper foundation has already been established. We lay approximately 1 inch of new asphalt over the existing surface, and it gives a fresh, new look to any parking lot or roadway.

➤ Asphalt Milling

This process removes old asphalt while keeping the previous foundation. Milling the existing asphalt allows roadways or parking lots to use the existing slope and elevation to drain areas. Milling is a resourceful way to improve parking lots in a cost-efficient manner.

➤ Pavement Foundation

In order to properly construct new pavement, a foundation must be laid requiring a sub-grade, followed by rock work to meet the correct grade levels resulting in a proper slope.
